📁 PROFESSIONAL EXPERIENCE

02/2024 – Present
Milan, Italy

Fullstack Engineer, BLUE Reply

- Developed financial services applications using **Angular**, **Java Spring**, and **SQL**.
- Implemented new features from analysis documents using best practices and design patterns; led large-scale upgrade of components and frameworks.
- Built a cross-platform mobile app in **Flutter** for **Android** and **iOS**, integrating web view, fingerprint authentication, and geolocation; managed app/play store releases and supported teams in UI/UX accessibility improvements.
- Managed code integration with **Git**, automated builds and deployments with **Jenkins**, and tracked activities with **JIRA**.
- Handled AMS for automotive company, fixing production issues, ensuring SLA compliance; improved PHP code performance and led change requests.
- Developed consumer loans loading using **Vue.js**, transforming **Adobe XD** designs into responsive UIs, updating **CSS/JS** libraries, and optimizing processes.
- Created an internal **Generative AI** tool for fast prototype generation using **React**, **Python Flask**, and **Express.js**, enabling quick mockup creation from prompts and code translation
- Performed effort estimations and solution design involving functional and technical documentation, diagrams and microservices interaction architectures. Led technical analyses involving multiple vendors for service integration.

🎓 EDUCATION

09/2021 – 12/2023
Salerno, Italy

MSc in Computer Science, University of Salerno

I followed the curriculum "Software Engineering for IT Management" focused on:

- Artificial Intelligence & NLP
- Software Engineering for AI
- Project Management
- Software Maintenance and Evolution

I graduated with a final grade of 110/110 cum laude defending a thesis in Software Engineering and Artificial Intelligence entitled "Exploring the potential of quantum NLP for non-functional requirements classification".

09/2016 – 09/2020
Salerno, Italy

BSc in Computer Science, University of Salerno

I granted a solid background in Computer Science, with a focus on:

- Logic, Mathematics and Statistics
- Algorithms & Data Structures
- Operating Systems and Networks
- Software Engineering

🌐 LANGUAGES

Italian

English — B2

🔑 INTERESTS

Cooking

Football

Videogames

HARD SKILLS

Frameworks/Libraries: Angular | Flutter | React | Vue.js | Next.js | Java Spring | Flask | Bootstrap | Tailwind

Programming Languages: Typescript/Javascript | HTML/CSS | Java | Python | PHP | C

Database: MySQL | PostgreSQL | MongoDB | MS Access

Tools: Travis CI | Jenkins | GitHub Action | Docker | Kafka | Gradle | Maven | Gulp | Git | Slack | Trello | Jira

Methodologies & Concepts: Microservices | REST/SOAP APIs | Async Events | JWT | Agile/Scrum | CI/CD

SOFT SKILLS

Problem Solving

I enjoy tackling challenges and finding practical, efficient solutions, combining clear thinking from my studies with hands-on experience in professional projects. I pay attention to details and always try to find the best way to solve a problem.

Teamwork & Collaboration

I value fairness and open communication, working well with colleagues to achieve goals and support each other. I am ready to take extra responsibility when it helps the team succeed.

Leadership & Adaptability

I take initiative to guide teams and keep projects on track. I can adapt quickly to new situations, learning fast and adjusting my approach when things change, while keeping the team motivated and focused. I'm comfortable taking on responsibility and deliver results on time.

PROJECTS

HeartCare , Academic Project

In HeartCare I assumed the role of Project Manager for a web application project. I was responsible for tasks such as Task Scheduling, Risk Management, HR Management etc. Following an Agile methodology (SCRUM) we utilized ReactJS, Java Spring, and MySQL for the development.

FundMeNow , Academic Project

Ethereum DApp for crowdfunding developed for "Data Security" course using ReactJS, Truffle Suite and Solidity for smart contracts.

QNLP for NFR Classification , Master Thesis

Research study conducted for the "Software Engineering for Artificial Intelligence" course and for my Master Thesis. The research aims to assess the non-functional requirements classification capabilities of a quantum NLP model compared with shallow ML models and classical text vectorization techniques.

cASpER , Open Source Contribution

Maintenance activity on "CASPER - A Plug-in for Automated Code Smell Detection and Refactoring". The change requests are tracked from the proposal to the testing passing through the reverse engineering, the impact analysis and the development.

DECLARATION

In compliance with the Italian legislative Decree no. 196 dated 30/06/2003, I hereby authorize you to use and process my personal details contained in this document.
